

Assembly Instructions for Rax & Dollies Wheelie Rack

1. Take rack out of carton. You will find that the rack is already 90% assembled and just needs to be expanded to its full standing height and top rail inserted.

2. Pull the uprights up and outwards from each other to their widest points.

3. Insert the top bar into the 2 open tubes at the top of the uprights.

4. Adjust the height of top rail using the push buttons.

Note: On first time assembly, it is normal for the uprights to seem stubborn and seem not to pull far enough apart to hold the top rail. Feel free to pull the uprights apart from each other with enough force to insert the top rail.

When you remove your Rax & Dollies Wheelie Rack out of the carton, it will be folded down like this
